Abstract

1. Indian laws often contain complex legal terminology that makes legal information difficult for ordinary citizens to understand.
2. JustiFi proposes an intelligent, web-based legal companion to simplify Indian laws and legal procedures.
3. Integrates Natural Language Processing (NLP), Large Language Models (LLMs), and Retrieval-Augmented Generation (RAG).
4. Retrieves relevant information from authoritative legal sources to support source-grounded explanations.
5. Proposes multilingual accessibility in English, Hindi, and Marathi.

Introduction

- **Authenticity**

  Official legal information resides in India Code, e-Gazette, and government portals.

- **Barriers**

  Formal legal language creates severe comprehension barriers for non-expert citizens.

- **Retrieval Gap**

  Existing platforms focus on document lookup rather than personalized citizen assistance.

- **Dynamic Shifts**

  Language diversity and rapidly changing legislation introduce continuous challenges.

Research Objective

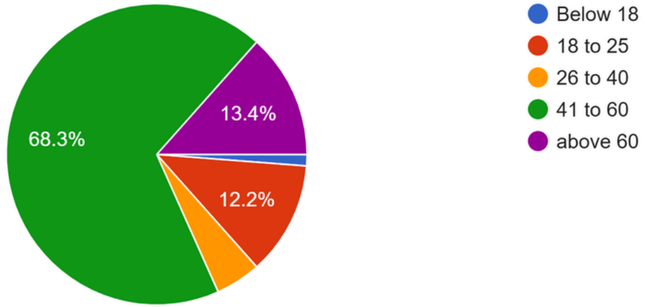

Develop a conceptual framework for making Indian legal information accessible, understandable, and trustworthy

Literature Review

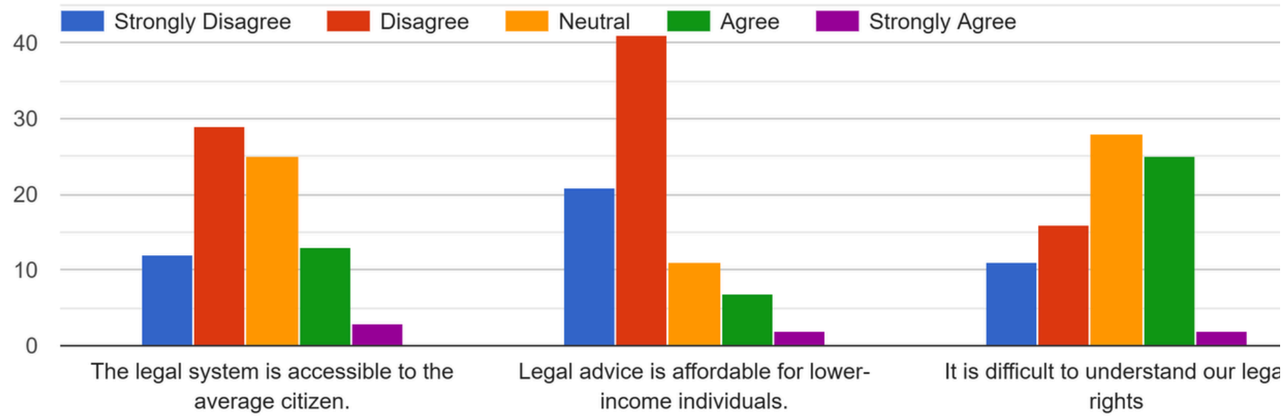

Existing research	Title of research paper	Objestive of study	Identified Gap	Tools used
Moro et al., (2025)	Legal Lay Summarization: Exploring Methods and Data Generation with Large Language Models	Explores methods for generating plain-language legal summaries using LLMs.	Need for integrated, citizen-oriented legal assistanc	Large Language Models (LLMs), legal text summarization methods.
Ghosh et al., (2022)	Indian Legal Text Summarization: A Text Normalization-Based Approach	Studies text normalization for Indian legal-text summarization.	Limited focus on multilingual, end-to-end legal assistance.	Text normalization techniques, Natural Language Processing (NLP), text summarization.
Garimella et al., (2022)	Text Simplification for Legal Domain: Insights and Challenges	Examines challenges in legal-domain text simplification.	Balancing simplicity with legal accuracy remains challenging.	NLP techniques, legal text simplification methods.
Kumar et al., (2022)	IndicNLG Benchmark: Multilingual Datasets for Indic Natural Language Generation	Provides multilingual datasets for Indic natural language generation.	Not specifically designed for legal assistance.	IndicNLG benchmark, multilingual Natural Language Generation (NLG) datasets.
Nigam et al., (2026)	AILQA: Evaluating AI-Driven Legal Question Answering Systems for the Indian Legal System	Evaluates AI models for Indian legal question answering using legal datasets and expert feedback.	Challenges remain in legal accuracy, context retrieval, and hallucination.	RAG, LLMs, embedding models, ROUGE/BLEU metrics, expert evaluation.

Survey Findings

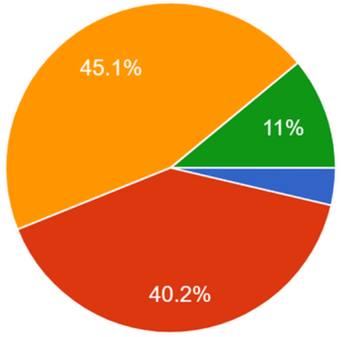

Age group
82 responses

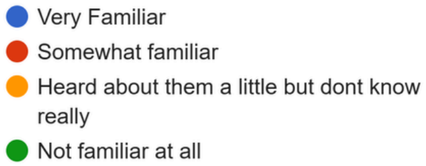

Please indicate your level of agreement with the following statements regarding the legal system.

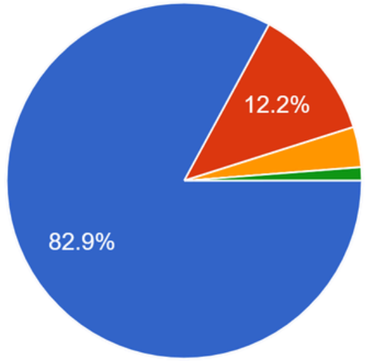

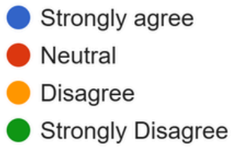

How familiar are you with laws such as Bhartiya Nyay Samhita and Indian Penal Code
82 responses

Do you believe that improving access to legal information can help citizens better understand exercise their rights

Proposed Work: A Privacy-First AI Framework for Accessible Indian Legal Information

Objective: To make Indian legal information understandable, accessible, reliable, and privacy-conscious for ordinary citizens.

Key Components

1. Multilingual NLP: Understands legal queries in English, Hindi, and Marathi.
2. Retrieval-Augmented Generation (RAG): Retrieves relevant information from authoritative legal sources, including India Code and the e-Gazette.
3. LLM-Based Simplification: Converts complex legal terminology into clear, easy-to-understand explanations.
4. Legal Verification: Connects generated responses to authentic sources and considers the relevant legal timeframe, including the IPC–BNS transition.
5. Privacy Protection: Incorporates personally identifiable information (PII) detection and redaction to reduce exposure of sensitive data.

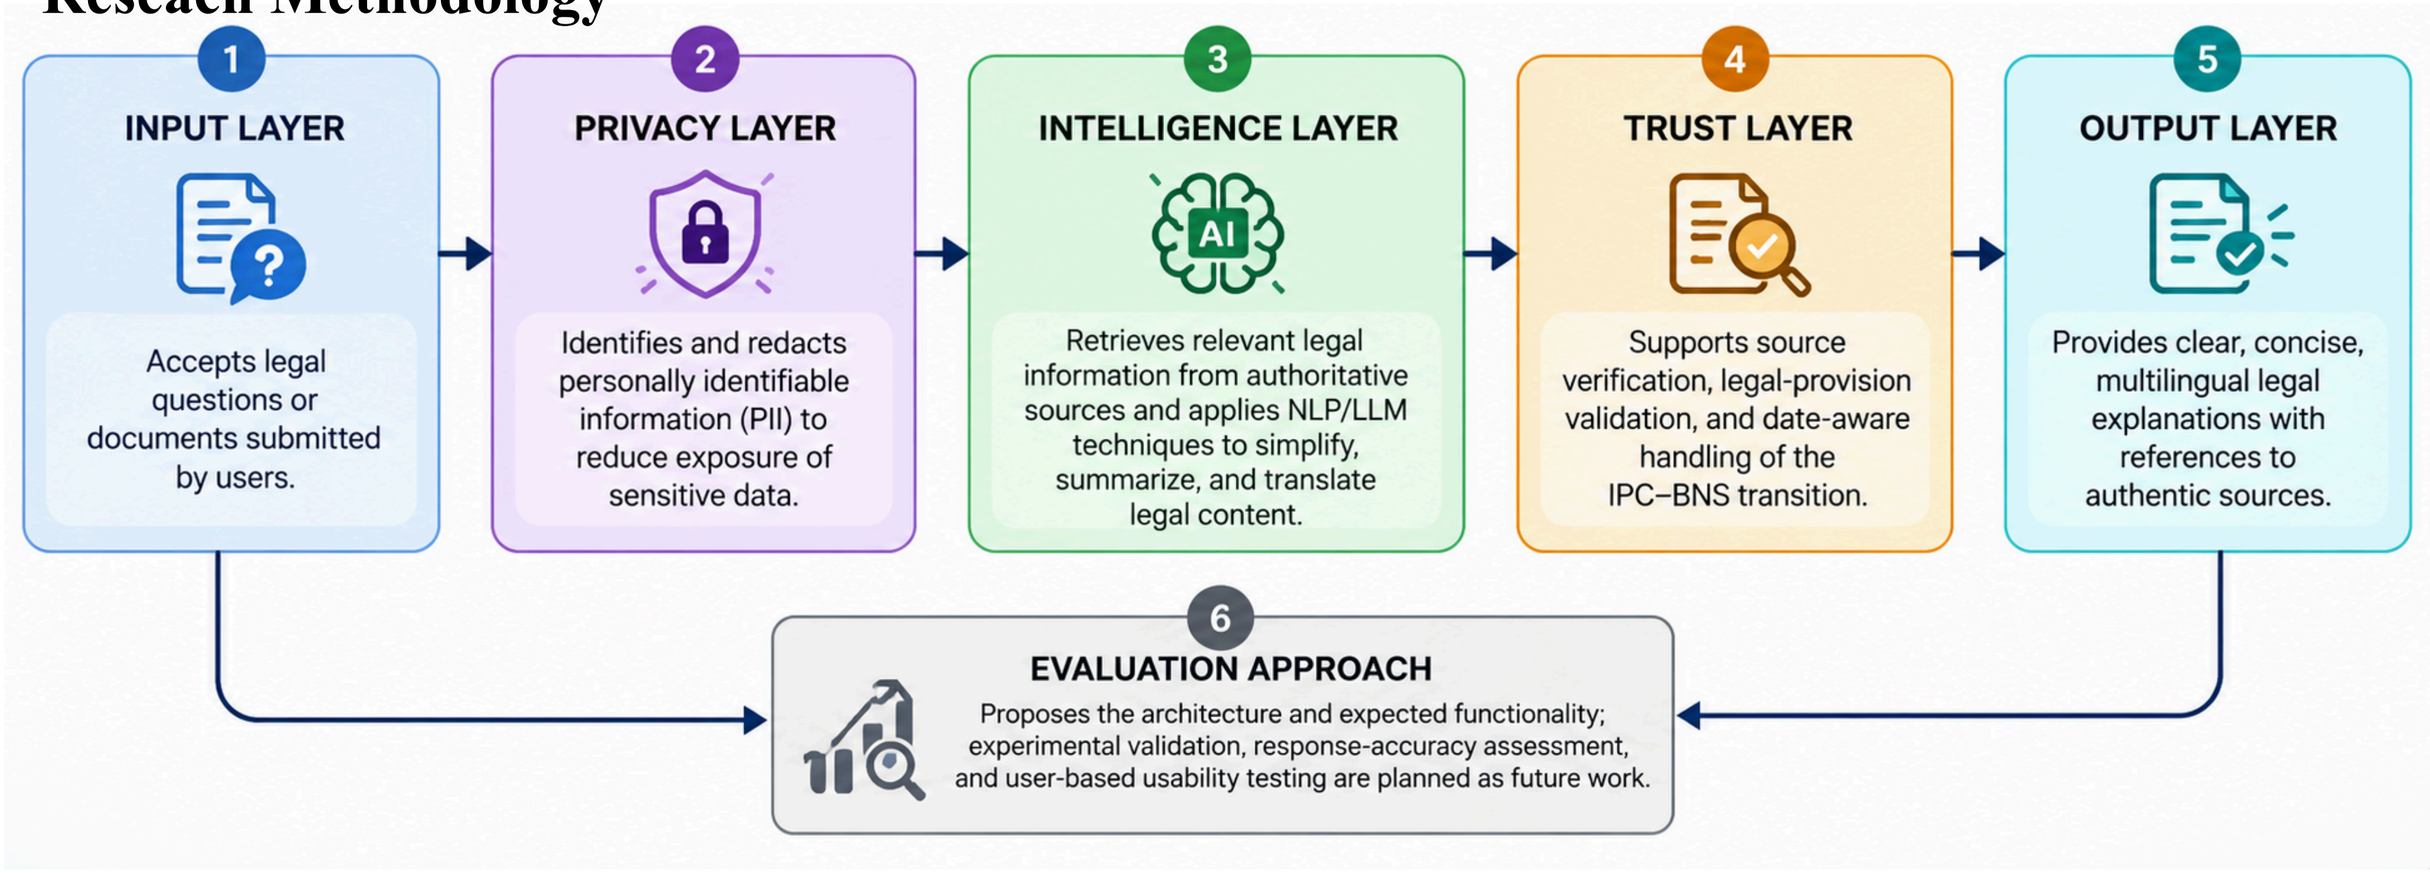

Expected Outcomes

1. Clearer understanding of legal information.
2. Improved access across language barriers.
3. Greater transparency through authentic legal references.
4. More responsible and privacy-aware use of AI for legal information.

Research Contribution: An integrated framework combining AI-based legal simplification, authoritative information retrieval, multilingual processing, legal-source verification, and privacy protection.

Research Methodology and Processing Flow

Reseach Methodology

JustiFi proposes an integrated AI framework combining NLP, LLMs, RAG, multilingual processing, and privacy protection to deliver accessible, clear, and trustworthy Indian legal information.

Research Methodology and Processing Flow

Processing flow

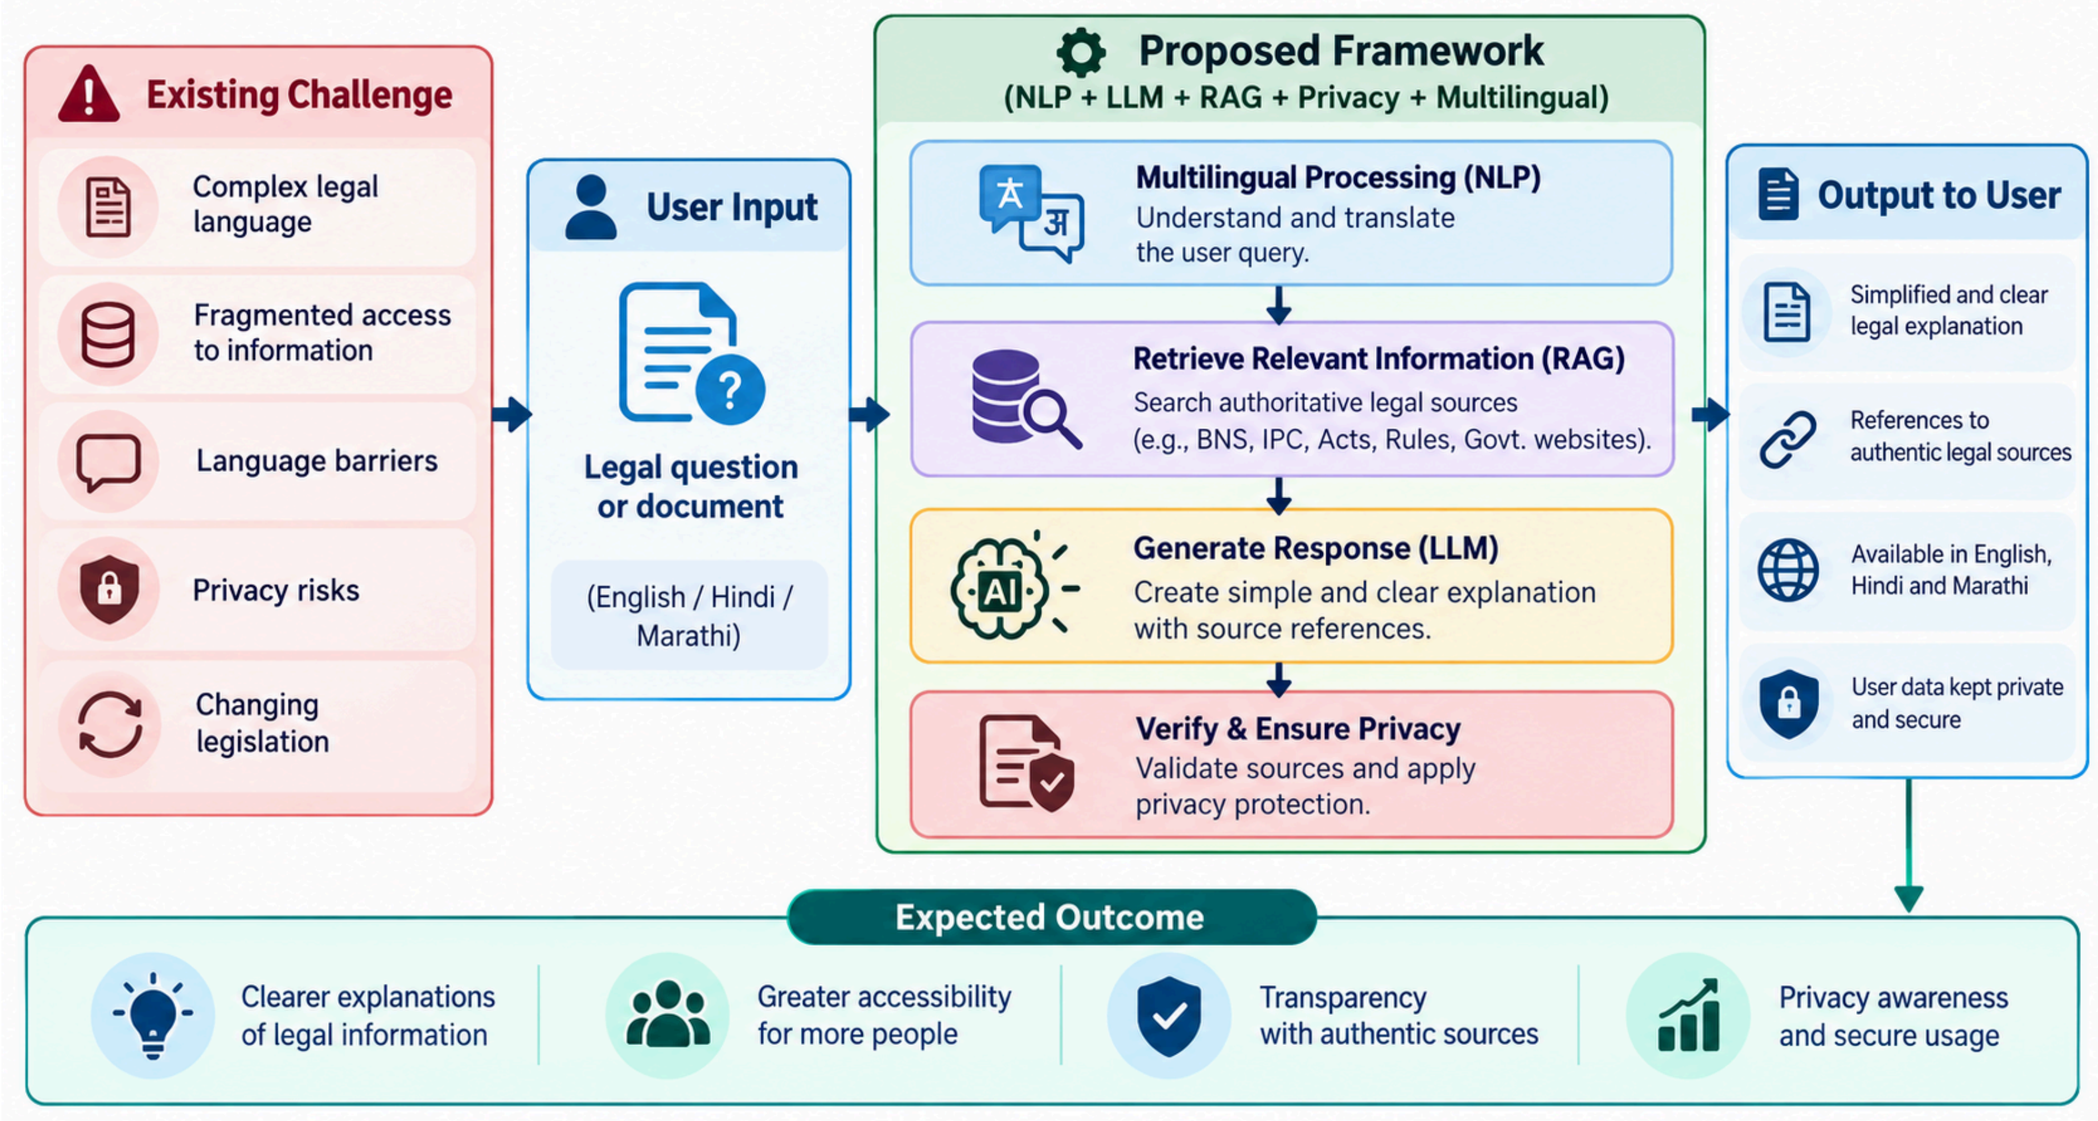

The proposed JustiFi framework transforms a user's legal query or document into a simplified, source-grounded legal explanation through the following stages:

1. **User Input:** Accept a legal question or document in natural language.
2. **Privacy Processing:** Identify and redact personally identifiable information (PII) to reduce exposure of sensitive data.
3. **Legal Information Retrieval:** Retrieve relevant legal provisions from authoritative sources using Retrieval-Augmented Generation (RAG).
4. **NLP and LLM Processing:** Understand the query, identify relevant legal content, simplify complex terminology, and generate an explanation.
5. **Legal Verification and Source Grounding:** Connect the response to authentic legal sources and consider the applicable legal timeframe, including IPC–BNS transitions.
6. **Multilingual Response Generation:** Present a clear, concise explanation in the user's preferred language, with legal references.

Final Output: Understandable, source-grounded, multilingual legal information with privacy-conscious processing.

Core Principle: Privacy by design, transparency through source references, and responsible AI-assisted legal information.

Prosessing Flow:

Results and Discussion

Expected Outcomes

1. **Legal Simplification:** Making complex Indian laws and legal procedures easier for non-expert users to understand.
2. **Authentic Information**: Using RAG to connect AI-generated explanations with authoritative legal sources.
3. **Multilingual Accessibility:** Supporting access to legal information in English, Hindi, and Marathi.
4. **Privacy Protection:** Incorporating PII detection and redaction into the proposed processing pipeline.
5. **Legal Adaptability:** Addressing date-aware legal-provision handling, including the IPC–BNS transition.

Results and Discussion

Discussion and Practical Significance

1. Integrates legal retrieval, AI-based simplification, source verification, multilingual processing, and privacy protection into one framework.
2. Provides a foundation for developing citizen-oriented legal information services.
3. Offers potential for deployment through educational institutions, NGOs, and legal-aid organizations.
4. Could support sustainable operation through institutional partnerships while maintaining free basic access for citizens.

Results and Discussion

Business Potential and Sustainability

1. Target Users

- Citizens seeking simplified explanations of Indian legal information.
- Educational institutions, NGOs, and legal-aid organizations.

2. Value Proposition

- Simplifies complex legal terminology.
- Promotes multilingual access to legal information.
- Emphasizes authentic-source transparency and privacy-conscious processing.

3. Proposed Business Model

- Free access to basic legal information for citizens.
- Potential institutional subscriptions for educational and nonprofit organizations.
- Customized deployments and additional features for organizational users.

4. Sustainability Considerations

- AI processing and cloud infrastructure costs.
- Maintenance and updating of legal information.
- Privacy, security, and continuous system improvement.

5. Future Business Validation

- Assess user needs and willingness to adopt the framework.
- Explore institutional partnerships and potential revenue streams.
- Evaluate operational costs and long-term financial feasibility.

Conclusion and Future Work

Conclusion

1. JustiFi proposes an integrated, privacy-first AI framework for simplifying Indian laws and legal procedures.
2. It combines NLP, LLMs, RAG, multilingual processing, legal-source verification, and privacy protection.
3. The framework aims to improve legal understandability, accessibility, transparency, and responsible access to legal information.
4. It incorporates date-aware legal-provision handling to address changes such as the transition from IPC to BNS.
5. JustiFi is designed to support citizens in understanding legal information, not to replace qualified legal professionals.

Conclusion and Future Work

Future work

1. **Prototype Development:** Implement the proposed framework as a functional web application.
2. **Accuracy and Reliability:** Evaluate legal-answer accuracy, retrieval quality, and source correctness using representative Indian legal documents.
3. **Multilingual Evaluation:** Test the quality of legal explanations in English, Hindi, and Marathi.
4. **Privacy and Security:** Assess PII detection, redaction effectiveness, and secure document processing.
5. **User-Based Evaluation:** Conduct usability studies with users from different educational and linguistic backgrounds.
6. **Business Feasibility**: Explore institutional partnerships and assess operating costs, user adoption, and potential subscription models.
